Gaming Laboratories International RNG Revised Report

Report N°	2016PTC674RNG00_1
Date	17 June 2016

Comments/Conditions

Comments

This Revised Report replaces Evaluation Report 2016PTC674RNG00, dated 8th April 2016.

This Revised Report was issued in order to:

- Include Romania Online within the scope of testing.
- Update the Software Product Details on pages 7 through 9 and 11 through 13.

As from 1st July 2006, it is the manufacturer's responsibility to ensure that their product is RoHS compliant with current EU directives.

The program Verify+ by Kobetron™ was used to generate the CDCK, SHA-1 and MD5 signatures listed in the Software Product Details section of this Report.

This non-jurisdictional Report is not intended to represent the final Report for any of the mentioned jurisdictions, it is for informational purposes only.

This Report is issued for the evaluation of the RNG only and covers the game ranges supplied in the Report.

Conditions

The tested RNG may only be used in connection to games which call the RNG with numbers within the ranges as specified in this Report.

RNG Analysis

RANDOMNESS REPORT FOR THE PLAYTECH MULTI RNG EVALUATION

The intent of this report is to indicate that GLI Europe B.V. (GLI) has completed its evaluation of the Playtech Multi RNG Evaluation (Random Number Generator).

SECTION I - SCOPE OF TESTING

Playtech submitted the required materials to GLI in order to conduct a random number generator analysis on the Multi RNG. The scope of this analysis was limited to software verification, source code review, and data analysis. The RNG was tested for its ability to randomly produce outcomes for Bingo, Poker, Casino and TV games.

The Multi RNG was evaluated against the RNG-specific requirements of the following technical standards:

- **AGCC** - Alderney - Technical Standards and Guidelines Version 4.1
- **Bulgaria** - General technical and functional requirements to gaming software and communication equipment of remote gambling games; Act on Gambling. Prom. SG. 26/30 Mar 2012 in force from 01.07.
- **Denmark Online:** Spillemyndigheden's Certification Programme - General requirements - SCP.00.00.EN.1.0; Spillemyndigheden's Certification Programme - Testing Standards for Online Casino - SCP.01.03.EN.1.0; Spillemyndigheden's Certification Programme - Inspection Standards for Online Casino - SCP.02.03.EN.1.0.
- **France - Online:** Arjel DET_EN_15042013 Technical Requirements File Version 1.2 of 24th September 2012, covered by article 11 of decree n°2010-509 of 18th May 2010 relative to the obligations imposed on approved online gaming or betting operators with a view to the online gaming regulatory authority controlling gaming data; Annex to the Technical Requirements File Version 1.2 of 23rd March 2012; Gambling Commissioner's Guidelines - v.1.1.0.
- **Gibraltar:** Remote Technical and Operating Standards for the Gibraltar Gambling Industry; Gambling Commissioner's Guidelines - v.1.1.0; Gambling Act 2005 - Act. No. 2005-72 Commencement (LN. 2006/114), except for s. 55(b) 26.10.2006 Assent 22.12.2005.
- **GLI-19 Interactive Gaming Systems V2.0.**
- **Isle of Man:** Gambling Supervision Commission's Statutory Document Number 731/07 Online; Gambling (Systems Verification) (No.2) Regulations 2007, laid before Tynwald 16th October 2007, coming into operation 31st August 2007.
- **Italy - Online:** Decree of the Director General of the Autonomous Administration of State Monopolies (AAMS) on the 10th of January 2011 and published under G.U. n. 27 on the 3rd of February 2011.
- **Malta Online:** Remote Gaming Regulations (SUBSIDIARY LEGISLATION 438.04), Third Schedule - Technical Requirements for Gaming System; LEGAL NOTICE 176 of 2004, as amended by Legal Notices 110 of 2006, 270 and 426 of 2007, and 90 of 2011.
- **Spain Online:** Resolution of 6 October 2014 of the Gaming Regulation Board passing the provision developing the technical specifications of gaming, traceability and security which have to be fulfilled by technical gaming systems of a non-reserved nature forming the object of licences granted under the Gaming Regulation Act n° 13/2011 of 27 May.
- **Romania Online:** DECISION amending the methodological norms of applying the Government emergency ordinance no. 77/2009 on the organization and operation of games of chance and amending and supplementing Government Decision no. 298/2013 on the organization and functioning of the National Office for Games of Chance, amending Government Decision no. 870/2009, approving the Methodological Norms for the application of Government emergency ordinance no. 77/2009 and repealing Government Decision no. 870/2009 on the organization and operation of games of chance.
- **UK Remote:** Remote Gambling and Software Technical Standards (July 2015); Testing Strategy for Compliance with Remote Gambling and Software Technical Standards - First (Published August 2009 – Updated July 2015)

SECTION II – SOURCE CODE REVIEW

Playtech submitted appropriate documentation and partial source code which pertains to the generation of random numbers. GLI reviewed the source code provided by tracing the path of the RNG application from the initiation of the draw to the selected output of random numbers. GLI inspected the source code, where practicable, in an attempt to find any undisclosed switches or parameters having a possible influence on randomness and fair play. GLI assessed the ability of the RNG to produce all numbers within the desired range.

RNG Analysis

SECTION III – DATA ANALYSIS

The game configuration and parameters for the data obtained and tested are listed in the tables below. Please note that this data has already been tested in a previous submission. GLI performed a data format check on each data set listed in order to confirm that the game parameters were correctly represented in the RNG data analyzed.

A set of numbers is said to be drawn *with replacement* if a number can be selected multiple times within the same draw. A set of numbers is said to be drawn *without replacement* if a number can only be selected once within the same draw.

Below also are listed the tests applied to each data set. For a description of the overall test methodology and a description of each test used, see *Appendix A*. The statistical testing was applied at 95%, 98% and 99% confidence levels.

SECTION III - I Bingo RNG

Data Parameters:

Number	Data Set	Range	Positions	Replacement	Draws
1	75-Ball Bingo	1-75	75	NO	59,300,000
2	80-Ball Bingo	1-80	80	NO	55,500,000
3	90-Ball Bingo	1-90	90	NO	49,100,000
4	Binary Data	0-4,294,967,295	1	N/A	3x 3,000,000

SECTION III - II Poker RNG

Data Parameters:

Number	Data Set	Range	Positions	Replacement	Draws
1	Standard 52-Card Deck	0-51	52	NO	55,000,000
2	Binary Data	0-255	1	N/A	12,000,000

RNG Analysis

SECTION III – DATA ANALYSIS

SECTION III - V Conclusion

For a summary of the statistical tests applied to each data set, see *Appendix A*. For a description of the overall test methodology and a description of each test used, see *Appendix B*.

Overall, the RNG passed the battery of tests for each configuration at the 95%, 98%, and 99% confidence levels.

SECTION IV - SUMMARY

Overall Evaluation of the Random Number Generator

GLI's conclusion based upon the tests applied to the Multi RNG data is that this random number generator has exhibited random behavior and is suitable for the applications as described herein. If a game utilizes a different range or a different number of selections from the included ranges, the RNG should be resubmitted to test that set of parameters.

RNG Analysis

APPENDIX B: Test Description

B.1 Definitions. The following terms apply to the below test descriptions. Randomness Device or Random Number Generator (RNG) output may be collected multiple numbers at a time. Each set of numbers is called a draw. Each individual number has a particular order within the *draw*. This is referred to as the number *position*.

B.2 Distribution Comparisons. Many of the tests compare an observed numerical distribution with an expected distribution. Unless otherwise specified, this is done by means of a statistical chi-square goodness-of-fit test. The value chi-square is computed in the standard way. If k is a possible value, o_k is the observed count of that value, and e_k is the expected count:

$$\chi^2 = \sum_k \frac{(o_k - e_k)^2}{e_k}$$

In the case where expected counts are too small for accurate use of the above formula, values are 'binned' together to ensure an appropriate minimum expected count. The resultant value for chi-square is compared against the distribution for the appropriate number of degrees of freedom. Unusually high (distribution mismatch) or unusually low (insufficient randomness) chi-square values can be causes for data failure.

B.3 Meta-testing. Evaluation of groups of p -values may include a meta-test for extremity of high or low p -values, a meta-test for frequency of high or low p -values, and a meta-test for uniformity of p -values, as appropriate.

B.4 Confidence Level. The statistical tests conducted by GLI are done at a particular *confidence level*. Common confidence levels used include 95%, 98%, and 99%, depending on jurisdictional requirements, and intended use of the RNG. High confidence level testing has low risk of mistakenly failing a good RNG, but higher risk of passing a bad RNG. Lower confidence level testing has increased power of detecting bad RNGs, while also increasing the risk of false failures of good RNGs. Specifically, the confidence level represents the probability that an ideal source of randomness would pass the testing. If an RNG passes statistical tests at a given confidence level, passage at all *higher* confidence levels is implied.

B.5 Tests. Some tests are only applicable to certain types of data. Some tests may be applied only to a portion of the data. Some tests may require that the data be parsed, binned, or otherwise transformed, as necessitated by data format.

RNG Analysis

APPENDIX B: Test Description

Adjacency Blocks:

For each draw, the data is first sorted. Then the amount of contiguous blocks of numbers is counted. These statistics are then compared against the expected. For example, if a draw consists of the numbers

1, 5, 4, 2, 6, 9

the data would be sorted and separated into blocks. The resulting statistic would be 3.

Adjacency High-Low:

For each draw, the number of local extrema ('highs' and 'lows') in the data is recorded and compared with the expected distribution. These are also referred to as 'turning points'. For example, if a draw consists of the numbers

1, 3, 5, 7, 2, 9

there would be one local maximum (7) and one local minimum (2). The resulting statistic would be 2.

Adjacency Max-Min:

For each draw, the difference between the maximum and minimum values is calculated and recorded. This is compared with the expected theoretical distribution. For example, if a draw consists of the numbers

2, 3, 6, 7, 4

the resulting statistic would be 5, the difference between the maximum value (7) and the minimum value (2).

Count of Counts (Poisson):

The Count of Counts Test first counts the occurrences of each value in each position of the data. These counts are then tallied and compared with the expected distribution of counts for the draw size and range of values.

Duplicates:

The Duplicates Test counts the number of times a draw is exactly duplicated in the data. In the case that a particular draw is repeated more than twice, every possible way to generate a duplicate is counted. This is compared against the theoretical distribution to verify that the number of duplicate draws falls within expected bounds. For example, consider the dataset consisting of the following draws of two numbers each.

- a) 1, 3
- b) 4, 1
- c) 1, 3
- d) 1, 3
- e) 4, 1
- f) 3, 1

The duplicate pairs are (a, c), (a, d), (c, d), and (b, e), for a total of 4 duplicates. (f) is not counted as a duplicate since the draw must match in order as well as values.

RNG Analysis

APPENDIX B: Test Description

Interplay Correlation:

The Interplay Correlation Test measures statistical correlation between different positions of the same draw. For each pair of positions, statistical correlation is calculated as in the Serial Correlation Test. In the case of without replacement data, an adjustment is made to account for the expected resulting negative correlation.

Overlaps:

The Overlaps Test compares consecutive draws for overlapping values. The number of overlapping values is recorded for each pair of draws. This observed distribution of overlaps is then compared against the expected distribution. For example, if the following draws are observed consecutively,

- a) 1, 4, 5, 6
- b) 4, 1, 7, 6

the number of overlaps would be 3, representing the values 1, 4, and 6.

Coupon Collector's:

The Coupon Collector's Test is applied positionally. The data is parsed until all possible values have been observed, then the number of values checked is recorded and the count is restarted. This is compared with the expected distribution. For example, if the set of all possible values is {0, 1, 2} and the first position of each draw is

1, 0, 1, 0, 2, 0, 1, 2, ...

then all values are observed in the first position by the fifth draw. All values are then observed within the next 3 draws, so the first two statistics for the first position would be 5 and 3.

Permutation:

The Permutation Test is a test applicable to data that represents a reordering of numbers. Each draw can be considered as a permutation of the original ordering. Every permutation can be decomposed into disjoint cycles, which represent the possible positions a number would occupy if the same permutation is applied repeatedly. For each draw, three statistics are collected based on the cycle decomposition:

- The number of cycles.
- The size of the smallest cycle.
- The size of the largest cycle.

Each of these statistics generates a distribution of observations which are compared with their respective expected distributions. For example, if the following draw were observed as a reordering of the numbers from 1 to 6,

1, 3, 5, 4, 2, 6

the cyclic decomposition would be (1)(2 3 5)(4). 1, 4, and 6 remain in their original positions, so they form their own cycles. The values 2, 3, and 5 are shuffled, so they form a single cycle together. The total number of cycles is 4, the smallest cycle has size 1, and the largest cycle has size 3.

RNG Analysis

APPENDIX B: Test Description

Runs:

The Wald-Wolfowitz Runs Test is applied to each position within the draw. A center is established, typically the data median, and the number of 'runs' above and below the center are tallied. Values exactly equal to the center are discarded. This is compared to the expected distribution, which depends on the number of values above and below the center. For example, if the numbers drawn at a particular position were

2, 3, 1, 5, 4, 7, 3, 2, 3, 2, 3, 2, 6, 7, 3, 5

and the established center were the data median of 3, the data would be parsed for runs above 3 and runs below 3.

2, 3, 1, 5, 4, 7, 3, 2, 3, 2, 3, 2, 6, 7, 3, 5

This would be counted as 4 runs.

Serial Correlation:

The Serial Correlation Test measures statistical correlation between consecutive draws of the same position. For each position, the sample Pearson correlation coefficient is calculated. If X represents the first number, and Y the number that follows, then the coefficient is

$$r = \frac{cov(X, Y)}{s_X s_Y}$$

where s denotes the sample standard deviation. The coefficients are used to generate a p -value for each position.

Total Distribution:

The Total Distribution Test is a simple tally of all observed values throughout the data. This is compared with the expected distribution. Typically the expected distribution is a uniform distribution. In the case of unequal weighting of values, an appropriate discrete distribution is used.

Total Distribution by Position:

The Total Distribution by Position Test tallies the observed distribution of values for each position within the draw. Each of these distributions is then compared with the expected.

Unequal Probabilities Test:

The Unequal Probabilities Test is a test applicable to multi-value draws whose results are sorted. The frequency of occurrence of each value is tallied for each position in the sorted draw. The expected frequency is calculated, taking the sorted nature of the data into account. The expected and observed frequency distributions are compared for each position.

DieHard:

The DieHard Battery of Tests is a standard assessment of the randomness in raw outcomes generated from an RNG. The collection, designed by George Marsaglia, tests for a variety of patterns in the individual binary bits of RNG output. GLI uses a custom implementation to conduct DieHard testing.

Terms and Conditions

This Report is issued solely for the benefit of the Client for use only for and limited to the specific jurisdiction or standards referenced in the Report. This Report may not be relied upon for any reason by any person or entity other than the Client including, but not necessarily limited to, the manufacturer or developer of the items, a non-GLI Laboratory, or a Regulator not named in the Report (“a Third Party”).

Any Report produced by GLI is proprietary to GLI and the Client, because it contains confidential information of commercial value, the exposure of which to third parties could adversely affect both GLI and the Client. Accordingly, such confidential information is supplied in confidence, on the strict condition that no part of it will be reprinted or reproduced or transmitted to any parties external to the original contract without the prior written approval of the Parties. In particular, it will not be exposed to any person or organization which may be in competition with any of the Parties without the prior written approval of that Party. The testing performed by GLI is proprietary to GLI and/or various regulators. No third party may use, rely or refer to a GLI Evaluation Report, Test Report, Certification Document or test results without written permission of GLI and the respective regulator. Notwithstanding the above, the Parties may disclose confidential information if required to do so by regulatory agencies, pursuant to the laws and regulations of an applicable jurisdiction or by an order of a properly designated Court of Law in a relevant jurisdiction. However, in either case the Parties agree to immediately notify the other party of such a request.

Notwithstanding the above, any regulator may reprint, reproduce and transmit any document or information to any party that the regulator, in their sole discretion, deems appropriate.

This Report shall not be reproduced, except in full, without the approval of GLI Europe and the Recipient(s).

Any certification established by this Report applies exclusively to tests conducted on the specific items submitted, by the manufacturer or any other party, which are described on page one of this Report. It is the responsibility of the manufacturer and/or developer of the items submitted to apply for, obtain and maintain all necessary gaming licensure in each jurisdiction in which they do business, including state and tribal jurisdictions, where applicable. Any electrostatic test methods used by GLI Europe are intended only to simulate techniques observed in the field being used to attempt to disrupt the integrity of Electronic Gaming Devices. During the course of the testing, GLI Europe checks for marks, symbols or documents indicating that a device has undergone product safety or RoHS compliance testing, if required. GLI Europe also performs a cursory review of information accompanying the items submitted, where possible and when provided, for evidence that the items have undergone compliance testing for Electromagnetic Interference (EMI), Radio Frequency Interference (RFI), Magnetic Interference, Liquid Spills, Power Fluctuations, Electrostatic Immunity, Electromagnetic Compatibility and Environmental conditions. Compliance with any such regulations related to the aforementioned testing is the sole responsibility of the manufacturer and/or developer of the items submitted; GLI Europe accepts no responsibility, makes no representations and disclaims any liability with respect to all such non-gaming testing. Details of the testing methods used, excluded testing, and actual data showing the testing results are available to the Recipient(s) upon written request.

GLI EUROPE WARRANTS TO THE RECIPIENT THAT ALL SERVICES PROVIDED BY GLI EUROPE HEREUNDER HAVE BEEN PERFORMED IN ACCORDANCE WITH ESTABLISHED AND RECOGNIZED TESTING PROCEDURES AND WITH REASONABLE CARE IN ACCORDANCE WITH APPLICABLE LAWS. GLI EUROPE DOES NOT MAKE, AND EXPRESSLY DISCLAIMS, ALL OTHER WARRANTIES OF ANY KIND, EXPRESSED OR IMPLIED, INCLUDING WITHOUT LIMITATION ANY WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY, SUITABILITY OR FITNESS FOR A PARTICULAR PURPOSE. WITHOUT LIMITING ANY OF THE FOREGOING, UNDER NO CIRCUMSTANCES SHOULD THE CERTIFICATION ESTABLISHED BY THIS REPORT BE CONSTRUED TO IMPLY ANY ENDORSEMENT OR WARRANTY REGARDING THE FUNCTIONALITY, QUALITY OR PERFORMANCE OF THE SUBJECT HARDWARE OR SOFTWARE, AND NO PERSON OR PARTY SHALL STATE OR IMPLY ANYTHING TO THE CONTRARY. THE LIABILITY AND OBLIGATIONS OF GLI EUROPE HEREUNDER, AND THE REMEDY OF THE RECIPIENT, UNDER OR IN CONNECTION WITH THIS AGREEMENT SHALL BE LIMITED TO, AT GLI EUROPE'S OPTION, REPLACEMENT OF THE SERVICES PROVIDED OR THE REFUND BY GLI EUROPE OF ANY MONIES RECEIVED BY IT FOR THE SERVICES PROVIDED. IN NO EVENT SHALL GLI EUROPE BE RESPONSIBLE TO THE RECIPIENT OR ANY THIRD PARTY FOR ANY CONSEQUENTIAL, INCIDENTAL, DIRECT, INDIRECT OR SPECIAL DAMAGES, INCLUDING WITHOUT LIMITATION DAMAGES FOR LOST PROFITS OR REVENUE, BUSINESS INTERRUPTION, OR PUNITIVE DAMAGES. EVEN IF GLI EUROPE HAD BEEN ADVISED OF THE POTENTIAL FOR SUCH DAMAGES AND WHETHER SUCH DAMAGES ARISE IN CONTRACT, NEGLIGENCE, TORT, UNDER STATUTE, IN EQUITY, AT LAW OR OTHERWISE. ALL RIGHTS AND REMEDIES OF THIRD PARTIES RELATING TO PRODUCTS AND SERVICES THAT ARE THE SUBJECT OF THE CERTIFICATION ESTABLISHED BY THIS REPORT SHALL BE THE EXCLUSIVE RESPONSIBILITY OF THE RECIPIENT AND GLI EUROPE EXPRESSLY DISCLAIMS ANY LIABILITY WHATSOEVER IN CONNECTION WITH SUCH THIRD PARTY RIGHTS AND REMEDIES. GLI EUROPE AND THE RECIPIENT ACKNOWLEDGE AND AGREE THAT THE SERVICES PROVIDED BY GLI EUROPE HEREUNDER COULD NOT BE RENDERED BY GLI EUROPE UNDER THE TERMS PROVIDED HEREIN WITHOUT AN INCREASE IN COST IF GLI EUROPE WAS REQUIRED TO PROVIDE ANY WARRANTIES IN ADDITION TO, OR IN LIEU OF, OR WAS REQUIRED TO ASSUME ANY LIABILITY IN EXCESS OF, THE FOREGOING.

If you should have any questions regarding this information, please feel free to contact our office.

Sincerely,

GLI EUROPE BV
